

# CSC493 – Weekly Reports

Your name: <Jarine Fietsop>

Week: <5>

## Part 1: Weekly Progress Report

- **Accomplishments:** What did you accomplish since the last class meeting?

Since the last class, I have continued to work on my code. I specifically designed the navigation bar for my website and added navigation tabs that will help customers navigate the store to different pages like home page, checking out page, a page that has blog post about the shop and a page that will lead customers to begin their shopping. Only the basis navigation has been added so far.

- **Challenges:** What are your current roadblocks?

I find it hard to add the little cart on the top right corner of my navigation bar but I am making some research on how to make that work.

- **Desired Discussion Points:** Do you have any desired discussion points that are not related to roadblocks?

I need some tips on how to better use Django for my back-end development. I am not done with the front end yet, but I think it will be cool to start thinking how I will set up the back end.

- **Future Goal:** What do you plan to accomplish before our next class meeting? These plans should be related to roadblocks or discussion points. If you plan to change direction, explain why.

I plan to have continue coding in the upcoming week and probably complete the home page and at least add one other page from the options I have on navigation bar. I want a page to open up when the link is clicked.

## Part 2: Time Reporting

Make sure that as you fill out the first prompt, you include in enough detail in the summary. For example, "debugging" is vague, but "debugged function X to make sure that when user does action Y, it is called and returns the value Z" is better.

- **Time Spent:** Briefly explain how much time you spent on your project. If you worked on multiple components, each should get a detailed summary.

7 hours  
5 hours spent on coding.  
Used an hour asking for help from a friend when the navigation bar was not the way I wanted  
Used an hour researching how to design and add the cart to the navigation bar.

- **Weekly Total Time Spent:** Make sure to add up all the hours and minutes correctly.

About 7 hours in total

- **Total Project Time Spent:** After the number of hours and minutes, make sure to briefly explain whether you are on track and if not, what you may need to do in order to achieve what you set out to accomplish.

Yes, I am on track with what I plan to do because I am holding firm to the blueprint that I have for my project.

## Rubric:

The following rubric will be used, but they might change as needed.

### Accomplishments (3 points)

1 point for a general description of progress, 2 points for specifics on progress, 3 points for specifics AND referring to previous targets and explaining how currently accomplishments build on previous ones.

### Challenges (3 points)

1 point for mentioning there are roadblocks, 2 points for specifics, 3 points for specifics AND what was done already to try to overcome them.

### Desired discussion points (2 points)

1 point for at least one relevant discussion point as a general question, 2 points for relevant discussion points with specifics

### Future Goals (2 points)

1 point for concrete future targets (i.e. "working more on the project" is a zero, but "working on getting component X to interface with component Y" suffices), 2 points for tying in the targets with what was hopefully discussed in the meeting.

### Time Spent (3 points)

1 point for including general statements of how much time was spent ("4 hours on coding"), 2 points for splitting time into specific parts ("1.5 hours on research on component X, 1 hour coding, 2.5 hours debugging"), 3 points for specific parts and details on the pieces ("1.5 hours researching Turtle interface for drawing concentric circles given inputs from the user, 1 hour coding function X that used that interface, 2.5 hours testing function X by giving it multiple values and fixing errors for values A, B, C, and D")

### Weekly Total Time (1 point)

### Total Project Time (2 points)

1 point for summing the values correctly, 2 points for the total time AND reflection on progress (you are confident to fit the target and if not, what course corrections you anticipate needing to make)
